

Through strategic investment in breeding programs and identification of elite genetics, SHIMA Wagyu is uncompromising in its pursuit of excellence, sourcing the most proven and dominant bloodlines available across the globe.

To date, we have drawn on the TAJIMA genetic sires – MICHIFUKU, ITOSHIGENAMI, KITATERUYASUDOI, SANJIROU, TERUTAINI40-1 and SHIGESHIGETANI – to infuse powerful marbling traits through the herd's breeding females.

These sires have been crossed with TOTTORI and ITOZAKURA-based females to ensure high growth, while aiming to maintain 50-70% TAJIMA bloodlines in offspring. The genetics of renowned Japanese cow, SUZUTANI, have also been integrated. Every month, carcass data is analysed and measured to track genetic performance.

Shima Wagyu processes 500 carcasses monthly, genetically tracing and analysing data from live weights to final carcass measurements. This data, linked to genetics, is captured throughout our feedlot programs, optimizing quality and efficiency.

Shima Wagyu combine the power of world-class proven genetics with discerning selection for high marbling and strong growth rates to produce consistent, high-quality Wagyu livestock.

"We have integrated a selection of very growthy sires into our breeding program, whilst continuing to maintain our emphasis on high marbling."

**IDENTIFIERS: GRSFS1312, DSWFN7171, SPLFP0139, KT4FK1888**  
**SEMEN PACKAGES NOW AVAILABLE FOR PURCHASE!**

Domestic & Export offered. Elite sire genetics – EBV's and other details available.  
Vendor: SHIMA WAGYU

**STUD SHIMA BULLS & HEIFERS ALSO AVAILABLE FOR LIVE EXPORT**
